

Job Requirements

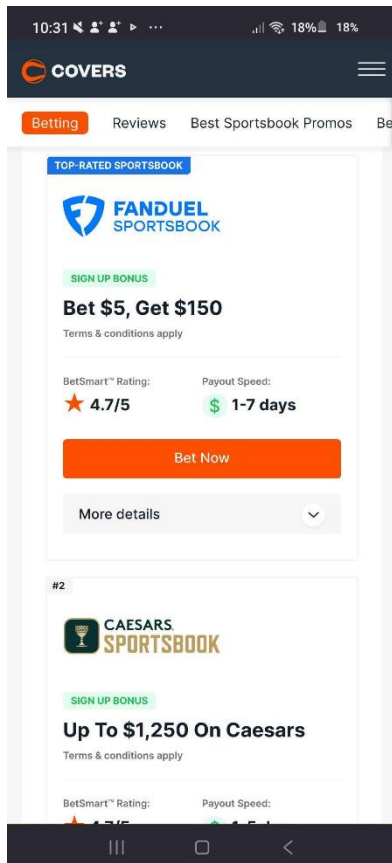

Create a html table and accompanying CSS to style it.

The table is for a top list of sportsbook companies, to be published in comparison articles. The table must be fully responsive for mobile devices.

The table should have a similar look and feel to this:

Sportsbook	Bonus	BetSmart Rating	Payout Speed	Benefits	
TOP-RATED SPORTSBOOK					
	Bet \$5, Get \$150 <small>Terms & conditions apply</small>	★★★★★ 4.7/5 FanDuel Review	\$ 1-7 days	<ul style="list-style-type: none">✓ Competitive pricing✓ Offers same-game parlays✓ Exclusive live streaming	Bet Now
#2					
	Up To \$1,250 On Caesars <small>Terms & conditions apply</small>	★★★★★ 4.7/5 Caesars Review	\$ 1-5 days	<ul style="list-style-type: none">✓ Generous welcome bonus✓ Offers same-game parlays✓ Ample betting options	Bet Now

And the mobile version like this:

Menu column title elements required are:

- Sportsbook
- Bonus
- Rating
- License **(This replaces "Payout Speed", which is not required)**
- Key features
- (No column title required for button column)

The buttons and image will be hyperlinked to our affiliate partners.

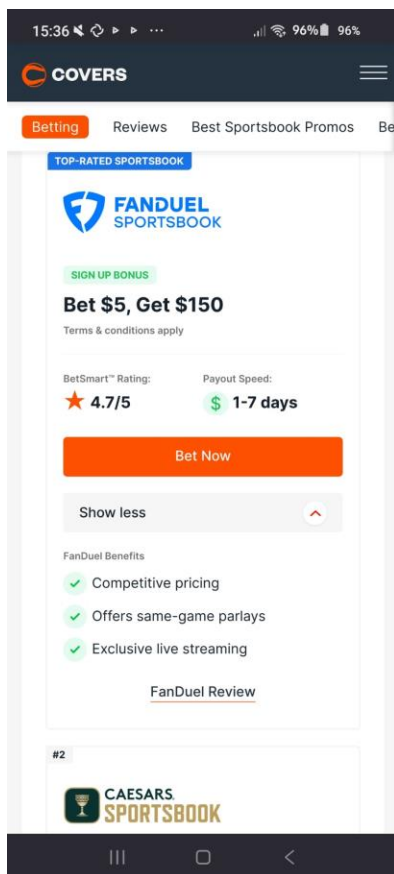

The table text, button text and images will be edited at the html level.

The CSS should set the image sizes for different devices.

Accordion elements

The top list table should have an accordion element, with only the top six rows displayed. Any further rows will be revealed via a "Read More" label.

The mobile version should also have an accordion element on each row labelled "more details" which when expanded reveals the key features and looks like this.

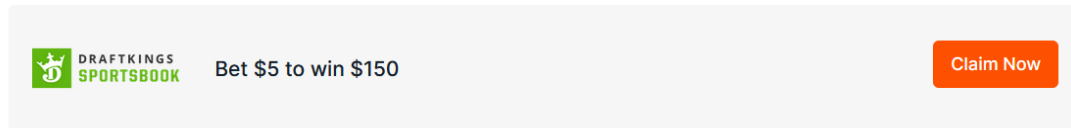

The live site can be viewed here:

<https://www.covers.com/betting/usa/colorado> (This is not the site for publication).

To complement this, we would like a second table, also styled by CSS. This will be a more basic table - something like this:

1. DraftKings Colorado

The tables should not be identical to the examples but must look professional, clean, and modern.

Please ask if anything is not clear.
